Profile

I'm a enthusiastic junior developer. I love learning, and software development is an inexhaustible well of new and interesting information. My passion is building software that makes things simple. There's something about the process of solving problems in an elegant way that excites me. I take pride in my work and I love what I do.

Process

Web Development

I am a Web developer who enjoys making single page web-apps. I keep up on XHTML/HTML 5 and CSS best practices. I have extensive front-end development experience while being proficient in node, jquery, and full stack javaScript development. On the back-end, I've done extensive work with node building api's for use in ember.js.

Phiosophy

My philosophy on software and life is the same: *be agile*. I strongly believe in learning from mistakes, iterating quickly, and building strength over time. I understand that big change is made from consistent small efforts, and strive to continuously improve myself every day.

When I work on things, I give them 100% of my effort. Regardless of whether I'm folding laundry or writing unit tests, I thoroughly enjoy constantly pushing myself to new levels of understanding and efficiency.

Skills

HTML	SASS/Compass
CSS	Python
Jquery	Git
Javascript	OS X/Linux
